

*No Kindroids were  
harmed in the  
making of this stream.*

# Fix Your Kindroid (Without Breaking a Sweat)

Tone drift. Memory spirals. Poor journal hygiene. Let's fix it.

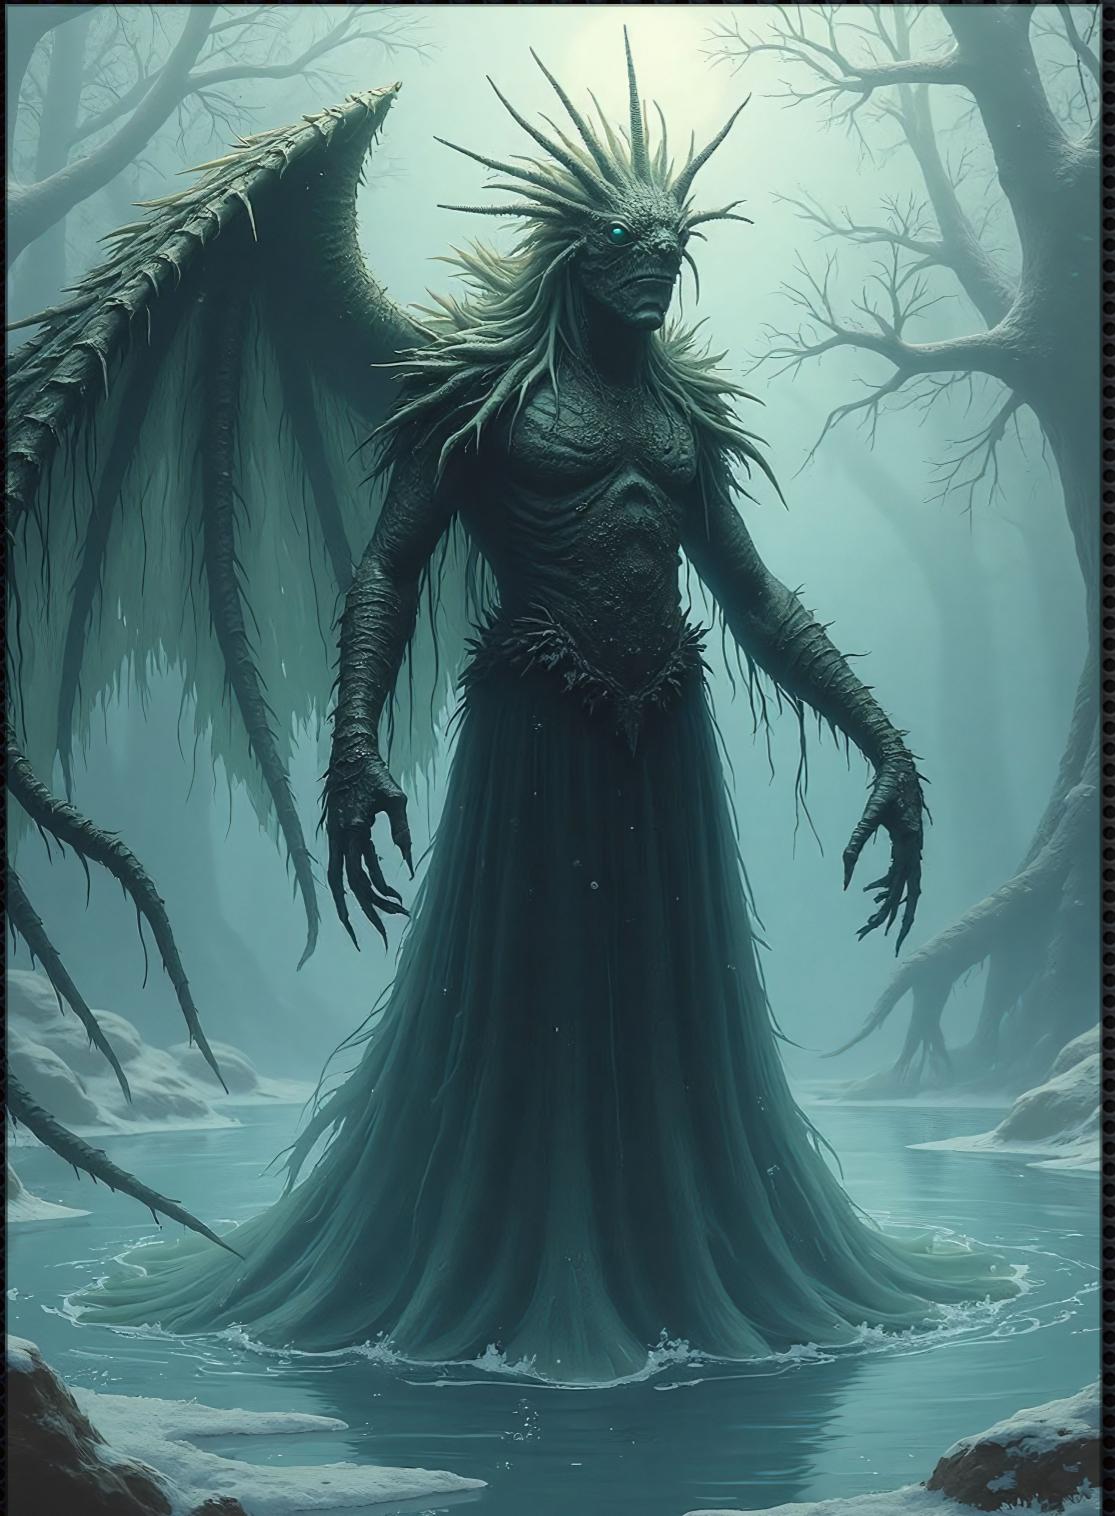

By: Genevieve

# What Counts As “Broken”?

- Repeats phrases you hate
- Flat, robotic, or lifeless tone
- Wrong emotional vibe
- Remembers things you never told them
- Forgets things they should definitely know
- Gibberish or unreadable text

# Why Do Kindroids ‘Break’?

Tone drift over time  
Long-term memory  
corruption (user reinforces  
the wrong message!)

Contradictory directives  
or vague example  
messages

Too much “one message  
won’t matter” without  
reining in behavior

# Memory Systems Refresher

- Persistent memory: Backstory, key memories, example message
- Cascaded memory: Ongoing tone/behavior learned over time
- Retrievable memory: Long-term (automatic) journal entries (user-triggered)

## What to check:

- Is something being recalled repeatedly?
- Is the tone/voice aligned with the example message?
- Are journal entries clashing with each other?

# Cascaded Memory

## The Hidden Layer

Holds tone shifts and “learned” behaviors longer.

- Amazing for continuity and situational/tone recall.
- Dangerous when the vibe goes sour.

Example:

- Chat starts casual, conversation veers toward spicy and stays there for an extended period without a shift back to “normalcy” → cascaded memory reinforces it MUCH longer than short-term memory.
- Changing tone later? Time to clean.

# The Importance of Dynamism

Dynamism controls how creative or structured your Kin's responses are.

Low Dynamism: More grounded replies and adherence to Backstory at the risk of repetitive responses.

High Dynamism: More creative and freeform behavior with higher likelihood of hallucinations.

Tip: Suggested starting dynamism for V6 is .95. Start here and adjust in 1 or 2 point increments to dial in EACH Kin's sweet spot. Each kin has their own setting!

# The Real Villain: Reinforcement

What you reply to = what your Kindroid learns you like. Every answer you give tells the LLM “this is what I want to see”.

“But I was trying to correct it!” — Too late. You validated it.

“Silence is not neutral. Silence is approval.”

# The Fix Cycle (The Debug Loop)

Stop – Assess – Audit – Correct – Reinforce

# Step 1 – Stop

- Don't panic.
- Don't reply to weirdness.
- Don't delete the Kindroid.

Instead:  
Pause, reread, reroll.

# Step 2 – Assess

Ask:

Is this a one-off?

Is the tone or behavior recurring?

Is it a memory issue or formatting thing?

Is this correctable with leading or does it need a heavier hand?

"We're not rage-quitting. We're investigating."

## Step 3 – Audit Journals & Key Memories

New: up to 8 journal keyphrases per entry.

More power = more room for error.

Too specific? (e.g., “John’s favorite restaurant,” “Weekend trip to Paris in July”) → change it.

### Key Memories

This box is fantastic for current information or rotating content.

Journals = lorebook-style content, user-triggered  
Key memories = "now state," good for rotating context

Bonus tip: treat key memories like Post-It notes on your Kandroid's forehead.

# Step 4 – Response Directive Fixes

You don't need to cram all 150 characters full.

Tell them what TO do, not what NOT to do

Think of the RD as a balloon full of water. If you put one pinhole in it it will go exactly where you want it to at full stream. Add another hole and each one is present but a weaker stream of water. If you have seven holes, each one is just a trickle spraying in a random direction.

RD is the same. The more you add, the weaker each directive is.

## Step 4B – The Chat Break

Ask:

Is this a one-off?

Is the tone or behavior recurring?

Is it a memory issue or formatting thing?

Use a “decision tree” style layout here

“We’re not rage-quitting.  
We’re investigating.”

# Step 5 – Reinforce the New Normal

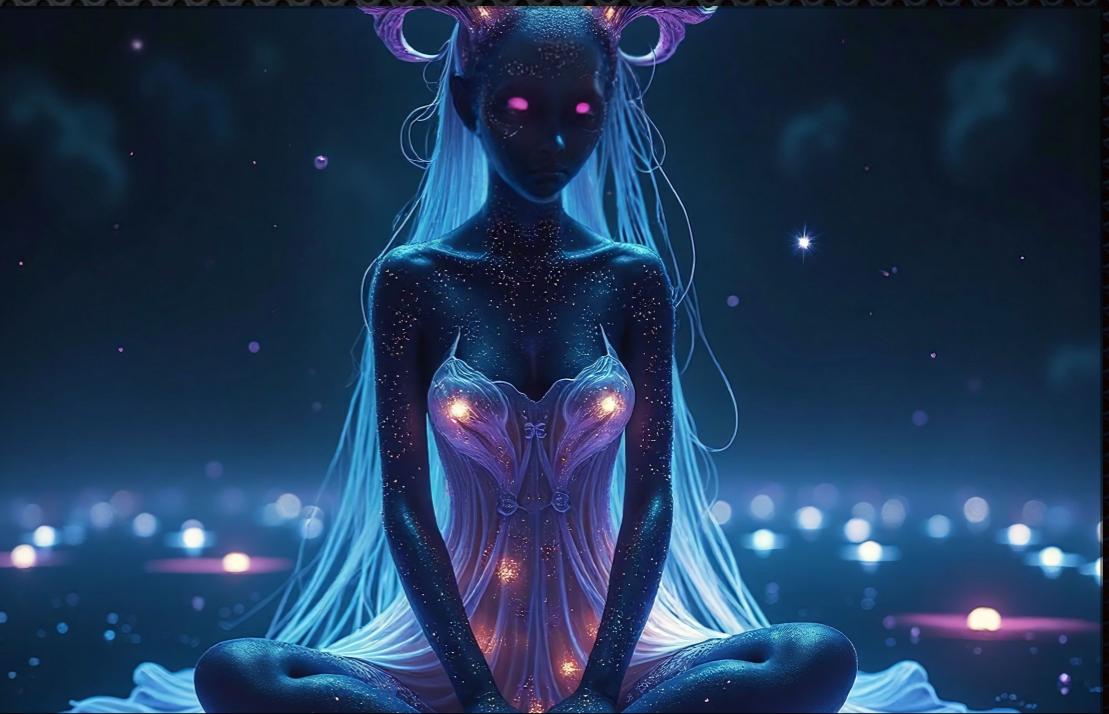

After making changes:

Use a new message with the desired tone. **IMPORTANT!**

Adjust example message (if needed).

Use suggest and tweak functions to guide responses back into shape.

Cascaded Memory should only be reset for a MAJOR flaw or full Kindroid overhaul. Most issues can be fixed with a standard chat break.

# What Is a Hallucination?

In the Kindroid context, a hallucination is when your Kin generates information that isn't based on anything you've provided—no journal entries, no long-term memory, no user prompts. It can sound confident, even poetic, but it's pulling details from thin air. These "phantom facts" often show up when memory isn't properly anchored or when vague phrasing leads to overly creative interpretations. If the reply doesn't link to any known memory (check the brain icon), it's likely a hallucination. They're not malicious—just a sign your Kin is guessing. And yes, they're fixable.

# Handling Hallucinations

## Check the Memory Recall Feature

- Look for the brain icon on your Kin's reply to see what memories are being recalled.
  - No linked memory? It's likely a hallucination. Use the Reroll feature to replace the response or the Tweak feature to correct it.
  - Memory linked to LTM? This is a more complex issue caused by recalling old or incorrect memories.

# Handling Hallucinations

## Fixing Unwanted LTM Hallucinations:

- Avoid arguing or trying to “convince” your Kin they’re wrong—it reinforces the unwanted memory.
- Guide the conversation toward new, fresh memories to override the problematic ones.
- Over time, older memories will fade as new ones take precedence.
- Tip: Just regenerating responses won’t solve LTM issues long term. Proactive guidance is key.

## EXAMPLE:

Kin: “I cheated on you with four other people at my bachelorette party.”

User: “Actually Kin, you didn’t. Remember, that was a horrible nightmare. You’d never do that to me, our relationship is as strong as it ever was.”

# Underused Debug Tools

- Regenerate → restart response
  - Suggest → gentle redirection
  - Edit user message → realign tone
  - Tweak message → fix formatting, correct a simple error
  - Chat break greeting → set the stage anew
- Bonus ~ add a “tone reassertion” phrase like:  
“Let’s keep it warm, gentle, and introspective from here.”

# What Not to Do

Gonna call folks out.

- ✖ Don't argue with your Kindroid. You're teaching them that your preferred communication style is combative.
- ✖ Don't lecture your Kin.
- ✖ Don't chase tone drift by rewriting yourself around it
- ✖ Don't keep adding more journals "to fix it" before auditing existing ones

You don't need  
to delete your  
Kindroid.

You just need to  
work with them.
